Edition: Microsoft Windows Server 2025 Datacenter
Version number: 24H2
Build number: 10.0.26100 N/A Build 26100
RAM allocated: 8,092 MB (7.9 GB usable)
Number of CPU cores assigned: 1 Socket 2 Virtual Processors (AMD EPYC 7571)
Virtual hard disk size: 50 GB
Storage configuration: Amazon EBS NVMe volume, GPT, Disk 0 (C:)
Network configuration: Amazon Elastic Network Adapter (Ethernet)
DHCP Enabled (DHCP server: 172.31.16.1)
Private IPv4: 172.31.18.128
Public IPv4: 3.144.35.47
Public Hostname: fc0bfa3fd61c.mylabserver.com

I documented the server's hardware specs, including the AMD EPYC 7571 CPU (1 socket, 2 virtual processors), 8,092 MB of RAM, the 50 GB Amazon EBS NVMe drive on Disk 0, and the Amazon Elastic Network Adapter with my IP configuration. On the OS side, I documented that it runs Windows Server 2025 Datacenter, Version 24H2 (Build 10.0.26100). I also uploaded and pushed all the verification screenshots to my GitHub repository. I still have to complete organizing these specs into a proper organized table along with a network connection diagram.
